

# WHY IT IS IMPORTANT TO KEEP YOUR NOSE CLEAN?

- Reduces allergic responses **by rinsing allergens**
- Decreases risk of infections **by removing bacteria and viruses**
- Higher efficiency of nasal medications **by removing mucus**
- Reduces dryness and irritation **by hydrating nasal passages**
- Improves breathing **by reducing congestion**

## Drug-free, gentle relief

The Nasal Shower can be used with a simple, drug-free saline solution. Unlike other methods, it cleans and relieves the nose delicately from symptoms such as a runny or blocked nose, thanks to the gentle mist.

Manual nasal irrigation is messy and, like with standard nasal sprays, a jet of saline solution is propelled into the nose which can be very disturbing.

Additionally, with decongestant nasal sprays there is a risk of overdosing and side effects.

# RESPIRATORY DISEASES THROUGHOUT THE YEAR

With the change of seasons children can suffer from different respiratory diseases making it difficult to breathe freely.

During **Autumn** and **Winter** viruses start spreading, affecting the airways with symptoms such as blocked or runny nose, coughing or sore throat.

During **Spring** and **Summer**, pollen can trigger allergic rhinitis causing runny nose, sneezing or itchy eyes and nose.

Symptoms of respiratory diseases during the year might affect the nose, the throat or the lungs. Depending on which part of the airways is affected, the treatment will be different.

## FOUR SEASONS, ONE SOLUTION

With the new OMRON C102 Total you can efficiently treat and provide relief for different respiratory symptoms and diseases throughout the year, thanks to the 2-in-1 Nebulizer with Nasal Shower.

**Nebulizer:**  
efficient  
lung deposition

**Nasal Shower:**  
relieves  
the nose

## NASAL SHOWER

The **Nasal Shower** is used with simple saline solution. It cleans the nasal cavity and helps relieve symptoms of conditions such as common cold, allergic rhinitis or sinusitis.

The Nasal Shower connects to the compressor and produces a gentle mist, which relieves the nose more delicately than other methods. The large particle size is optimal for the upper airways.

## NEBULIZER

The **Nebulizer** provides efficient treatment of lower airway diseases such as bronchitis, bronchiolitis and asthma with symptoms such as coughing, sore throat or shortness of breath.

The Nebulizer transforms the liquid medication into an aerosol with small particles to assure the medication deposition is deep inside the lungs.
